

Q11 (20 marks) Select the best correct answer, and write it in the table below.

1. The fuse symbol shown in the figure below is for:

a-IEEE/ANSI standard	☒ b-IEC standard	c-IEEE/ANSI standard	d-old symbol
----------------------	---	----------------------	--------------

2. In normal operation of the circuit, the fuse wire is:

☒ a-A very low resistance component	b-A very high resistance component	c-A very high inductive component	d-A very low inductive component
--	------------------------------------	-----------------------------------	----------------------------------

3. The amount of current that a fuse can easily conduct without interrupting the circuit is known as:

a-Breaking Capacity	b- I^2t Value	c-Response Characteristic	☒ d-Current carrying capacity
---------------------	-----------------	---------------------------	--

4. The electronic fuse is a type of:

☒ a-Surface Mount Technology type fuses	b-Bolted Type Fuses	c-High Rupturing Capacity type fuses	d-Rewirable type fuses
--	---------------------	--------------------------------------	------------------------

5. When a fault occurs in the system, the type of fuses that automatically reset after the operation is classified as:

a-Non-current limiting fuse	b-Current limiting fuse	☒ c-Resettable Fuse	d-One Time Only Fuse
-----------------------------	-------------------------	--	----------------------

6. The type of fuses used to protect the transformers as an expulsion-type fuse is:

a-Resettable Fuses type	☒ b-Dropout Fuse type	c-Fast-Acting Chip Fuses type	d-High Current Rated Chip Fuses type
-------------------------	--	-------------------------------	--------------------------------------

7. For an electric load of 1760W connected to a 220V supply, the required fuse rating will be:

☒ a-11 A	b-8 A	c-12 A	d-17.6 A.
---	-------	--------	-----------

8. The smallest current that will cause the fuse element to melt is:

a-The maximum fusing current	☒ b-The minimum fusing current	c-The current rating	d-The fusing factor
------------------------------	---	----------------------	---------------------

9. For circuit breakers length of the arc is directly proportional to its:

a-Charged capacitor	b-magnetic field	☒ c-Voltage	d-Cross-section
---------------------	------------------	--	-----------------

10. For air circuit breakers under fault current:

a-The main contacts opened, and the arcing contacts opened	b-The main contacts closed, and the arcing contacts opened.
☒ c-The main contacts opened, and the arcing contacts closed.	d-The main contacts closed, and the arcing contacts closed.

Q.N	1	2	3	4	5	6	7	8	9	10
Ans	B	A	D	A	C	B	A	B	C	E

$$\frac{P}{V} \times 1.25$$

$$\frac{18}{20}$$

Q2(5 marks)

Mention the classification of LV fuses depending on fusing factors.

* Q3 (5 Marks)

Mention 5 types of Low voltage AC circuit breaker.

Common strip (ganged)

LV: AC CB

- ↳ EL CB : earth leakage
 - ↳ MCCB : molded case
 - ↳ MCB : molded
 - ↳ RCCB : Residual
 - ↳ GFCI : Ground fault Circuit Interrupter
- GFCI

Good Luck
