

B. Match the appropriate answer
2.8. September

2. C 3. A 4. D 5. B

-Select the true or false answers

10. Hysteresis is the gap between the operate point and the release point to smooth the operation of the sensor.
TRUE FALSE (T or F)

11. The target size rule of thumb is: the size of the sensor's diameter, or three times the sensor's sensing range, whichever is greater. TRUE FALSE

3. A slide-by approach to the target has no impact on the sensing range. TRUE/FALSE

4. A straight on approach is called a lateral approach. TRUE FALSE

5. When two sensors are to be mounted side-by-side, the best approach is to use a straight on approach. TRUE FALSE

When two sensors are to be mounted side-by-side, the use of an alternate frequency head on one of the sensors will not prevent the sensors' sensing fields from interacting. TRUE FALSE

b. False c. True d. True e. False f. True

When a circuit breaker is turned off, it

When a circuit breaker is turned off or is tripped by a fault current, the circuit breaker interrupts the flow of current by separating its contacts.

The assembly reduces contact damage by dividing the arc into smaller segments which can be

A _____ strip is made of two dissimilar metals bonded together in a thermal-mechanical process.

In a thermal-magnetic circuit breaker, a ~~strong~~ strong field trips the circuit breaker when a short circuit is sensed.

the spaces below

_____ circuit breakers protect against short circuits,
_____ provide no overload protection.

circuit breakers have both overload and instantaneous trip features.

circuit breaker's continuous current rating is also referred to as its _____ rating.

is the application of circuit protection devices in series such that, when a fault occurs, only the nearest fault opens.

device is used to automatically trip a circuit breaker when the supply voltage drops.

is used to prevent two adjacent circuit breakers from being closed at the same time.

a) Voltage trip; b) mechanical interlock; c) Instantaneous magnetic-trip-only; d) Thermal-magnetic;
 e) Selective coordination.
