BATCH - E2 D

SR NO	MCQ	REMARK
1	Purpose of backup protection is. a) to increase the speed b) to increase a reach c) to leave no blind spot d) to guard against failure of primary	Ans:- d
2	Protective relays are the device that detect abnormal conditions in electrical circuits by measuring. a) Voltage b) Current c) Constantly the electrical quantities which differ during normal and abnormal condition d) None of the above	Ans:- d
3	The actual quantity for the relay may be. a) Magnitude b) frequency c) phase angel d) all of the above	Ans:- d
4	The operating speed of a relay depends upon the. a) rate of flux built up b) armature core air-gap c) spring tension d) all of these	Ans:- d
5	Plug setting of an electromagnetic relay can be altered by varying. a) number of ampere turns b) air gap of magnetic path c) Adjustable back stop d) None of these	Ans:- a

6	The torque produced in shaded pole structure induction type relay is. a)proportional to square of the current b)proportional to the current c)inversely proportional to the current d)inversely proportional to square of current	Ans:- a
7	Which of the following relay is overload relay? a)thermal b)electromagnetic c)induction d)all of the above	Ans:- d
8	In an overcurrent protection the setting of earth fault relay is. a)more than phase fault relay b)equal to phase fault relay c)less than the phase fault relay d)the two settings are unrelated to each other	Ans:- c
9	Inverse time current relays are used to protection of. a)feeders b)transformers c)alternators d) both (a) and (b)	Ans:- d
10	IDMT relay are used to protect the power transformers against. a)external short circuit b)overloads c)internal short circuit d)both (a) and (b)	Ans:- d
11	A fault current of 2,000 A is passing on the primary side of a 400/5 C.T.On the secondary side of the C.T.an inverse-time over current relay is connected whose plug setting is set at 50%.The plug setting multiplier will be. a)25 b)50 c)10 d)30	Ans:- c

12	In an inverse definite minimum time, electromagnetic type over current relay, the minimum time feature is achieved because of a) saturation of the magnetic circuit b) proper mechanical design c) appropriate time-delay element d) electromagnetic damping	Ans:- a
13	The bimetal strip in a thermal relay, consist of two metal strip of different. a) specific heat b) thermal conductivity c) coefficients of expansion d) all of the above	Ans:- c
14	The plug setting of a negative sequence relay is 0.2 A. The current transformer ratio is 5:1. The minimum value of line to line fault current for the operation of the relay is. a) 1A b) 1/1.732 A c) 1.732 A d) 0.2/1.732 A	Ans:- a
15	The function of a relay is to: a) Detect fault b) Interrupt circuit c) Detect and interrupt d) Both of these	Ans:- a
16	Backup protection is provided so as to: a) Increase sensitivity b) Increase speed of protection system c) To act in case of failure of primary protection d) None of these	Ans:- c
17	Induction relays are used with: a) AC b) DC c) both of these d) none of these	Ans:- a

18	The pick-up current of a 100/5 transformer having a current setting of 300% will be. a)2.5 Amps b)5 Amps c)10 Amps d)15 Amps	Ans:- d
19	Microprocessor relay is a type of. a)Electromechanical relay b)Static analog relay c)Static digital relay d)All of these	Ans:- c
20	A relay has pick-up value of 10 A and the fault current in the relay coil is 25 A. Its plug-setting multiplier. a)2.5 A b)25 A c)35 A d) 250 A	Ans:- a
21	Modern Microprocessor relays are loaded with the function of. a)Memorized fault information b)Status information c)Accurate relay settings d)All of these	Ans:- d
22	A single phasing relay can be used with. a) 1 ϕ motor b) 2r ϕ motor c) 3 ϕ motor d) All of these	Ans:- c
23	A relay is used to. a) Break the fault current b) Sense the fault c) Sense the fault and direct to trip the circuit breaker d) All of these	Ans:- c

24	In impedance relay, current element torque should be. a) Equal to voltage element torque b) Greater than voltage element torque c) Less than voltage element torque d) None of these	Ans:- a
25	Over current fault is most likely in. a) Transformer b) Overhead line equipment c) Alternator d) Motors	Ans:- b
26	Plug setting of a relay can be changed by changing. a) Air gap b) Back up stop c) Number of ampere turns d) All of these	Ans:- c
27	Distance relays are generally a) Impedance type b) MHO type c) Reactance type d) All of these	Ans:- b
28	Buchholz relay is used to protect against a) Inter-turn fault b) External faults c) Rotor faults d) Every internal faults	Ans:- d
29	Instantaneous relay should operate within a) 0.0001 sec b) 0.001 sec c) 0.01 sec d) 0.1 sec	Ans:- c

30	MHO relay is inherently a a) Directional type b) Non-directional type c) Unidirectional type d) None of these	Ans:- a
31	Basic relay connection requirement is that the relay must operate for a) Load b) Internal faults c) Both (a) and (b) d) None of these	Ans:- b
32	Which of the following is not a quality requirement of relay system? a) Selectivity b) Cost c) Discrimination d) Sensitivity	Ans:- b
33	The neutral of 10 MVA, 11 kv alternator is earthed through a resistance of 5 ohms. The earth fault relay is set to operate at 0.75A. The CT have ratio of 1000/5. What % of alternator winding is protected. a)85% b)88.2% c)15% d)11.8%	Ans:- b
34	Consider a stator winding of a alternator with an internal high resistance ground fault. The current under the falut condition are shown in fig. The winding is protected using a differential current scheme with current transformer of ratio 400/5. The current through operating coil is.  a)0.1875 A b)0.2 A c)0.375 A d)60 KA	Ans:- c

41	The cost of the relay should be. a)low b)high c)affordable d)none of the above	Ans:- c
42	Electrical apparatus may be damaged, if they are made to carry the fault current for a.....time. a)short b)long c)both (a)and (b) d)none of the above	Ans:- b
43	Sensitivity and reliability are the quality requirements of.....equipment. a)isolator b)circuit breaker c)both (a) and(b) d)relay	Ans:- d
44	The ability of the relay system to operate with low value of actuating quantity is called as. a)simplicity b)reliability c)economy d)sensitivity	Ans:- d
45	is the ability of the relay systems to operate the predetermined condition. a)simplicity b)reliability c)economy d)sensitivity	Ans:- a
46	The device that detects the fault and initiate the operation is called as. a)circuit breker b)relay c)isolator d)none of the above	Ans :- b

59	Operating current in relay is. a) AC only b) DC only c) Both (a) and (b) d) None of these	Ans:- c
60	For phase fault on long line, which relay is used? a) MHO relays b) Reactance relays c) Impedance relays d) All of these	Ans:- c
61	For motor protection, which relay is used? a) Thermocouple type relays b) Bimetallic relays c) Electronic relays d) All of these	Ans:- d
62	For protection against synchronizing power surges, which relay is used? a) Split-phase relays b) Impedance relays c) Reactance relays d) MHO relays	Ans:- d
63	Under voltage relays are used for. a) Motors b) Generators c) Bus bars d) All of these	Ans:- d
64	Actual tripping of a static relay is obtained by. a) SCR b) Thyristors c) UJT d) None of these	Ans:- d

65	Instantaneous relay is. a) Hinged armature type b) Polarized type c) Balanced beam type d) All of these	Ans:- a
66	Relays for transmission line protection are. a) In three zones b) In two zones c) Independent of zone d) None of these	Ans:- a
